

F400

The REKKORD F400 is a fully automatic sub-chassis turntable that is not only convincing in terms of sound, but is also a real eye-catcher. The entire automatic system as well as the tonearm and the damped aluminum platter are built on a floating sub-chassis platform which is decoupled from the rest of the chassis. The F400 features a massless tracking force adjustment which optimizes the center of gravity directly at the bearing center. The automatic system is adjusted and fine-tuned by experienced technicians and is based on a highly complex mechanism which has traditionally matured and further developed over decades. The preadjusted high quality Ortofon 2M Red cartridge is mounted on a carbon fiber reinforced headshell which offers the perfect connection to the aluminium tonearm. The 2M Red is an all-purpose cartridge that delivers an open and dynamic sound with a slight touch of warmth. The plinth is made of MDF and is available in 4 different finishes: satin black, high gloss black, and cherry or makassar real wood veneers. Cables, dust cover and a single adapter comes supplied with the turntable.

Features

- Pre-adjusted Ortofon 2M Red cartridge

The 2M Red is a high quality MM cartridge that delivers an open and dynamic sound with a slight touch of warmth.

- Fully automatic

The automatic system is completely disengaged while the record is playing. Comfort with unrestricted sound quality.

- 8,3" weight-balanced tonearm

Ultra low mass (ULM) aluminium tonearm with steel tip-ball bearings from our own production.

- Massless tracking force adjustment

Massless tracking force adjustment which optimizes the center of gravity directly at the bearing center.

- Damped aluminum platter

The solid aluminium platter has a damping ring on the inside that helps to dampen all resonances and minimizes wow and flutter.

- One piece MDF chassis

The main chassis is made out of a single piece of MDF which has an ideal resonance-dampening basic character.
